Eplexity Streamlines Managed Services with AWS and CloudCheckr

A case study on partnering for comprehensive cloud
governance

The Eplexity logo is centered within a large blue circle. It features the word "Eplexity" in a white, sans-serif font. The letter "x" is stylized with three horizontal lines passing through it. A small orange circle is positioned at the top-left edge of the blue circle.

Eplexity

Business Objectives

- Illustrate tangible cost savings and security recommendations during initial pre-sales consultations
- Streamline onboarding for customers via the AWS Partner Transformation Program
- Better leverage their DevOps team to automate processes and increase efficiency

The Results

- Reduced customers' AWS bills by 15% to 25%
- Enabled fast go-to-market for customers using cost and security recommendations generated in CloudCheckr
- Improved billing and alignment to AWS Well-Architected Framework via tagging and best practice scans for DevOps

Based in Denver, Colorado, Eplexity is a next-gen managed service provider (MSP) for Amazon Web Services (AWS) users in industries such as technology, communications, oil & gas, and manufacturing. Through a blend of managed and professional services, Eplexity develops customers' cloud journeys through their CXOS platform. As a member of CloudCheckr's Business Partner Program, Eplexity brings its customers continuous monitoring for security and cost optimization, saving them an average of 15% to 25% on their AWS bills.

Getting Started as an AWS and CloudCheckr Partner

[Eplexity](#) offers cost-effective migration, modernization, and cloud-managed services. Their CXOS platform features production-ready AWS Architectures Mission Control dashboard and other DevOps solutions, allowing businesses to reduce costs, time to market, and risk when migrating to AWS. By enrolling in the AWS Partner Transformation Program, Eplexity received a 12-month platform evaluation license to start using CloudCheckr.

Additionally, with the help of the [CloudCheckr Business Partner Program](#), Eplexity also received full onboarding and training with a CloudCheckr Partner Customer Success

Manager and ongoing operational consulting with a CloudCheckr Partner Development Manager. They have been a CloudCheckr customer for about two years.

Resources from CloudCheckr and the AWS Partner Transformation Program have made it easier for Eplexity to fast-forward AWS adoption for their customers. Additionally, as an AWS Premier Consulting Partner with DevOps and Migration competencies, Eplexity brings a unique level of expertise to their customers' cloud journeys. They also have a 100% AWS Certified operations team, led by Director of Operations Shiley Johnson.

CloudCheckr is beneficial from cost, security, and performance perspectives, and it has simplified the process of onboarding customers. It gives us all the services we need, so that we don't have to use multiple tools to find the same information.

Shiley Johnson, Director of Operations, Eplexity

CloudCheckr plays an integral role in enabling Eplexity's customers to take advantage of the security, reliability, and performance that comes out of a public cloud like AWS, both during and after migration. Customers don't always have the ability to migrate to the cloud

and later operate that infrastructure on their own, Johnson said. Eplexity helps make that "lift-and-shift" process more streamlined with design patterns that enable a fast go-to-market time. After completing the migration, CloudCheckr helps Eplexity's managed services team ensure the integrity and effectiveness of their customers' cloud environments.

Meeting the Standards of the AWS Well-Architected Review

The tools in CloudCheckr allow Eplexity to reduce their customers' cloud computing costs and find security vulnerabilities so that they meet [AWS Well-Architected Review](#) standards. Johnson and team chose CloudCheckr to simplify these reviews and keep customers' cloud infrastructures secure, high-performing, resilient, and efficient.

Once customers complete their migration and have gone through the onboarding process, Eplexity's managed services team, the Cloud Command Center (C3), takes over client relations. The Center of Excellence then uses CloudCheckr to easily monitor for security and find cost savings opportunities. Each month, they review customers' platforms so that they can right-size, purchase savings plans in AWS, and find vulnerabilities to roadmap an improved security strategy.

"The robust system within CloudCheckr helps hit on different areas related to the Well-Architected Review," said Johnson. "We can take that tool and plug it into the environment very quickly. It's just a

30-minute conversation with the customer to enable features, walking them through the platform, and asking them to let us digest that information for the next 30 days.”

We deploy CloudCheckr and then are able to look at the data from multiple angles from a Well-Architected Framework to demonstrate where customers currently are and then have that conversation around where they want to be.

As a result, the DevOps team at Eplexity can deploy a centralized service like CloudCheckr

within design patterns in the CXOS platform to understand where processes can be automated and streamlined.

“We have baked in a number of automations to deliver CloudCheckr as part of our DevOps services to clients,” said Chris Egloff, Resident Architect at Eplexity. “These include the automated provisioning of customer CloudCheckr accounts, Well-Architected Best Practice scanning, and automated tagging for billing and budgeting at the application, cost center, and account levels.”

To get the same recommendations that CloudCheckr offers, Johnson explained, Eplexity would require multiple disparate systems and tools to replicate those results. “It became an all-in-one tool rather than having to go back and forth through other utilities for monitoring,” Johnson said. “Now

we can use CloudCheckr and integrate it with additional layers from our other services to frame out an already clear picture.”

Finding Significant Cost Savings for Customers and Prospects

Eplexity saw early on in the process that [CloudCheckr could find cost savings](#) for their clients. One Eplexity customer, a manufacturing company, completed a migration from data center to AWS and started with a spend of around \$70,000 per month, Johnson said. Through CloudCheckr’s analysis, the Eplexity Center of Excellence saw that it could drive down the company’s costs by removing waste, rightsizing, and refactoring to AWS native services. Over a three-month period, Eplexity reduced the company’s AWS spend by about \$20,000 to \$30,000 per month.

Typically, said Johnson, Eplexity’s customers save between 15% and 25% per month on their AWS bills. Forrest Brink, Solutions Architect for Eplexity, explained that savings after cost optimization for the average Eplexity customer fall between \$2,100 and \$4,400 per month. Those figures, which came from recent customer successes, meet that 15 to 25% goal and represent significant savings, especially for small to medium-sized businesses.

Eplexity leveraged CloudCheckr to determine this cost optimization benchmark. Once they saw those savings again and again, Eplexity incorporated CloudCheckr into their pre-sales efforts to show prospects the tangible results they could achieve.

In addition to managed services, we’re using CloudCheckr equally as a pre-sales effort to demonstrate ahead of time what a potential roadmap might look like either in terms of improving security posture or bringing in some additional cost-saving opportunities.”

Shiley Johnson, Director of Operations, Eplexity

Those are some of the larger efforts that weren’t necessarily intended from the beginning, said Johnson, but have now grown and evolved as the result of working with CloudCheckr more.

The information that Eplexity’s sales team receives from CloudCheckr helps them get their foot in the door with potential AWS customers and illustrate realistic cost savings for that business.

According to Brink, roughly 90% of prospective customers enlist Eplexity to save money on their cloud expenses. Eplexity’s sales representatives can use CloudCheckr to give prospects cost optimization recommendations for their AWS environments right off the bat. By working closely with CloudCheckr as a strategic business partner,

as well as through their AWS Certifications, Eplexity can confidently demonstrate their AWS expertise and close more sales.

Ready to Make CloudCheckr Your Business Partner?

Johnson said that he and his team at Eplexity would absolutely recommend CloudCheckr for managed service providers. “CloudCheckr is a large piece of what we’re doing and a large

part of what we’re building not only now but into the future as we continue to go to market within different segmentations throughout AWS,” Johnson explained.

The world’s largest cloud solution providers have joined the [CloudCheckr Business Partner Program](#). Contact us today to learn how to grow around the most advanced cloud management platform available.

About CloudCheckr

We deliver total visibility—across multiple public clouds and hybrid workloads—making the most complex cloud infrastructures easy to manage. From government agencies to large enterprise and managed service providers, CloudCheckr customers deploy our SaaS solution to secure, manage, and govern the most sensitive environments in the world. Our industry-leading cloud management includes cost savings, billing & invoicing, cloud security & compliance, resource optimization, and automation available in CloudCheckr CMx, CMx High Security for regulated industries, CMx Federal for FedRAMP Ready procurement, and CloudCheckr Finance Manager for IT cost management across hybrid cloud.
