

# CLOUDCHECKR FINANCEMANAGER FOR HYBRID WORKLOADS

A complete picture of organizational IT costs from VMware and Azure Stack to the public cloud is now possible, enabling sophisticated enterprise cost control.

CloudCheckr FinanceManager for Hybrid Workloads is a fully-automated cloud finance tool bridging public and private cloud. It allows organizations to optimize large and complex hybrid cloud environments while saving finance teams from the logistical headache of consolidating public and private cloud billing data using spreadsheets, custom scripts, or other manual error-prone processes.

CloudCheckr FinanceManager for Hybrid Workloads works by:

- Maintaining a rate card to convert the cost of CAPEX infrastructure into hourly charges
- Ingesting data from on-premises environments and calculating charges for resource usage
- Generating consolidated chargebacks, showbacks, and invoices

## INVOICING AND BILLING

- Fully automated IT billing
- Chargebacks and showbacks
- Customizable rate card for on-premises resources
- Dedicated billing features for the specific needs of MSPs and resellers

## EASY ADMINISTRATION

- Deploys in just a few clicks
- Custom dashboard views
- Automatically scales to meet demand
- Easy maintenance

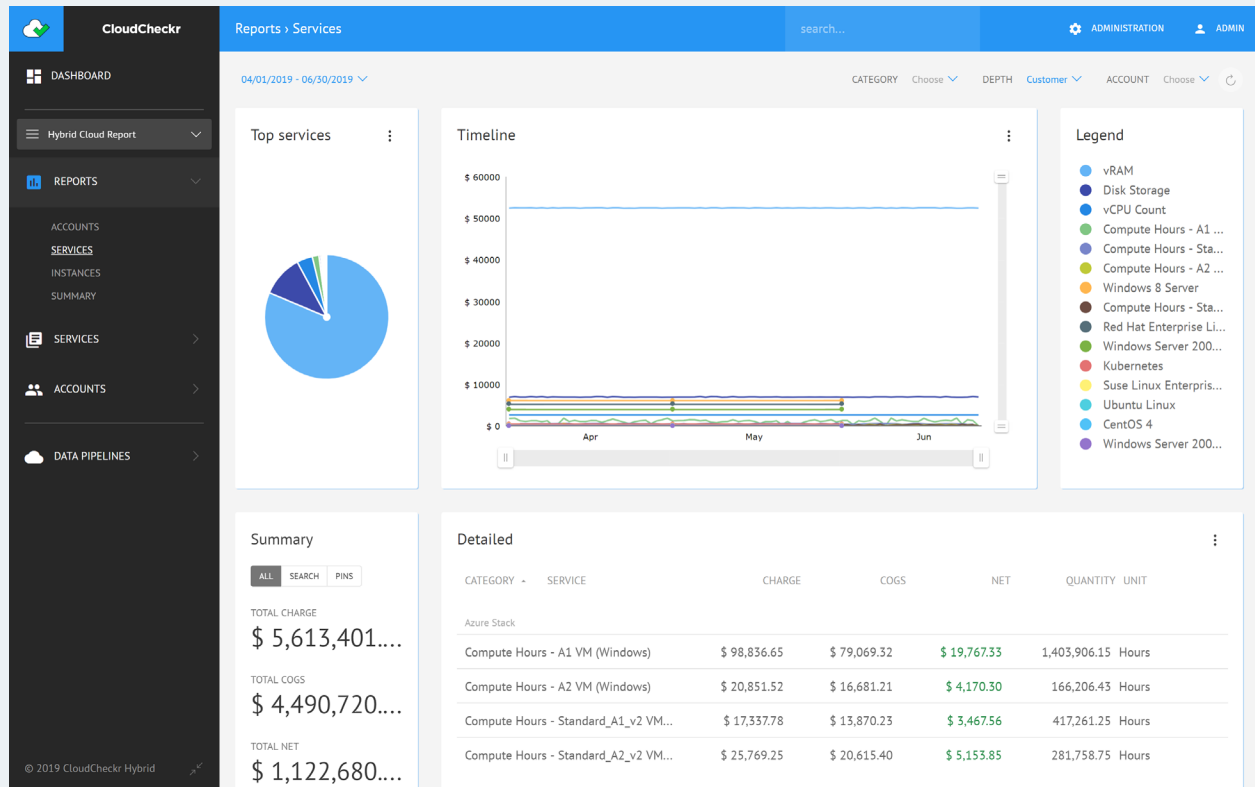

## ON-PREMISE SUPPORT
